3) $\Delta = 5550$

$KG = 8,45$

$KM = 11,95$

$Kg = 0,45$

$p =$

$G'M = 1,95\ m$

Desc	Peso	KG (m)	MV (t·m)
Δ	5550	8,45	46897,5
p	−p	0,45	−0,45p
DERIVA FINAL	5550		46897,5 − 0,45p

$KG' = \frac{\Sigma MV}{D_{FINAL}} = \frac{46897,5 - 0,45p}{5550 - p}$

$G'M = KM - KG' \rightarrow KG' = KM - G'M$

$KG' = 11,95 - 1,95 = KG' = 10$

$46897,5 - 0,45p = 55500 - 10p$

$10p - 0,45p = 55500 - 46897,5$

$9,55p = 8602,5$

$\frac{8602,5}{9,55} = p = 901\ T$

a) $p = 901\ t$

b) $KG' = 10\ m$
